

The All-bronze Taurus and Orbis Armillaries

The Taurus

This very special bronze armillary has been modelled on a three hundred year old Celestial Sphere.

The pivoting globe is mounted on "Taurean Horns" with a fixed horizon.

It features the bands of the Solstice, the Ecliptic, the Tropics, the Equinox, and the Equator with fitted Roman numerals, while the central orb marks the passage of spring and autumn.

The bronze is patinated to a rich antique sheen.

Available in two sizes:

Overall width: 17.5in. (445mm)

" " 20in. (508mm)

The Orbis

An impressive armillary constructed in the traditional way, weathered to a rich antique patina.

The band of the Equator displays fitted Roman numerals which add to its solidity and will remain easy to read even when the bronze has become stained with age.

The sphere also includes the Colures of the Equinox and Solstice, the band of the Ecliptic, and the rings of the Tropics; the gnomon arrow bears a central orb to mark the changing of the seasons.

Available in two sizes:

Sphere diameter: 15in. (380mm)

" " 18in. (475mm)
